CSS: Cascading Style Sheets

CSS defines how to display HTML elements. A CSS rule has two main parts: a selector, and one or more declarations. The selector is normally the HTML element you want to style. Each declaration consists of a property and a value. The property is the style attribute you want to change. Each property has a value.

A CSS declaration always ends with a semicolon, and declaration groups are surrounded by curly brackets.

```
p {color:red;text-align:center;}
```

To make the CSS more readable, you can put one declaration on each line, like this:

```
p {  
  color:red;  
  text-align:center;  
}
```

PART 1

Directions: Debug the following code. (5 points)

```
body {background-color: #33cc66;}  
  
p {  
  color = #ccff00;  
}  
  
h1 {  
  text-align: center  
  font-size: 20px;  
}  
  
img {  
  height 15px;  
  width 25px;
```

PART 2

Directions: In the space below, write a CSS rule using proper syntax that changes all the Heading 6 text to the color red. *Hint the property is color and the value is #ff0000.* (5 points)
