The problem is to design a delivery vehicle for Mr. Tomaso, a teacher at Stevenson High School. It should be able to drop a hacky-sack onto a target while riding down a zip-line. The project is for no reason at all except to waste valuable time that we could have been using to make something much more productive. The zip-line and vehicle will be located next to the football field at Stevenson. To project should not exceed \$20 and probably should cost no money at all.
